

DN1600 Inline Pressure Balanced Expansion Joints

KLINGER Turkey designed and manufactured (2) DN1600 inline pressure balanced expansion joints for a major steel plant in Turkey. Inline pressure balanced expansion joints hold pressure forces while allowing axial movements

Elbow Pressure Balanced Expansion Joints

KLINGER Turkey designed and manufactured (2) DN500 elbow pressure balanced expansion joints. This type of expansion joints are used where pressure loading on piping or equipment is considered objectionable. Major advantage of pressure balanced design is its ability to absorb externally imposed axial movement without imposing pressure loading on the system
