

Expansion Joints for Cement Plant

KLINGER Turkey manufactured several lens type and rectangular expansion joints for a cement plant in Turkey. Expansion joints are manufactured from carbon steel material and sand blasted and painted per customer's specification against corrosion.

Expansion Joints for District Heating

DN900 hinged type expansion joints were designed and manufactured by KLINGER Turkey. Units were designed for 12 barg and delivered to a major city in Europe. Hinged expansion joints are usually used in sets of two or three to absorb lateral and axial deflection in a piping system. Each expansion joint is restricted to pure angular rotation in a single plane while absorbing full pressure thrust.
